CHILDHOOD IMMUNIZATION

Protect Today. Prevent Tomorrow.

MEASLES

POLIO

DIPHTHERIA

WHOOPING COUGH

TETANUS

HEPATITIS B

HIB (MENINGITIS)

PNEUMOCOCCAL DISEASE

HEALTHY CHILDREN HAPPIER FAMILIES

A HEALTHIER INDIA BEGINS WITH VACCINATED CHILDREN

WHY VACCINATE?

- **Protects** against serious and life-threatening diseases
- **Prevents** disability, complications and hospitalisation
- **Builds** immunity safely before exposure
- **Protects** babies and vulnerable people around us
- **Helps** prevent outbreaks in the community
- **Saves** families time, worry and treatment costs
- **Keeps** children healthy, active and ready to learn

MYTHS vs FACTS

MYTH: Vaccines cause autism.
FACT: Extensive research shows no causal link.

MYTH: Too many vaccines overwhelm a child's immune system.
FACT: Multiple vaccines are safe and do not overwhelm immunity.

MYTH: Natural infection is better than vaccination.
FACT: Infection can cause severe complications; vaccines build protection with much less risk.

MYTH: Rare diseases no longer need vaccines.
FACT: Diseases can return when vaccination rates fall.

MYTH: Mild fever or soreness means the vaccine is harmful.
FACT: Mild, short-lived reactions are common; serious reactions are very rare.

VACCINATE ON TIME • COMPLETE EVERY DOSE • KEEP BOOSTERS UP TO DATE

Missed a vaccine? Ask your Pediatrician about catch-up vaccination.

Choose facts, not fear. Vaccines save lives.
